STUDY FINDINGS

+ “Intraocular pressure (IOP) readings obtained by an Icare tonometer in our study have shown reasonable concordance with Goldmann applanation tonometry (GAT). Overestimation of IOP measured by rebound technology as compared with GAT is directly proportional to IOP. As the I-care [sic] tonometer measured IOP with good accuracy, it may be considered as an appropriate method for clinical use in normal subjects and glaucoma patients.”

JOURNAL OF GLAUCOMA, December, 2014

+ “The use of Icare tonometry decreased the need of EUAs to evaluate children with glaucoma and significantly increased successful IOP measurement in clinic.”

J AAPOS, 2012

+ “The Icare Instrument was easy to use and was able to obtain rapid and consistent readings with minimal training. It was tolerated well by patients with no use of topical anesthetic.”

JOURNAL OF GLAUCOMA, Jan/Feb, 2008

+ “The Icare is easy to handle and high reliability. The data are comparable with those from the [Goldmann applanation tonometry].”

OPHTHALMOLOGE, April, 2007
